

## DEHYDRO 2 EMERGENCY PUMPING KIT

A Dehydro is an emergency pumping kit which has a powerful pump, 2x packs of FloodSax Door and discharge hoses for defending a property from flooding.

Supplied in a sturdy easy-carry case, there is sufficient space within to not only store the pumping equipment, but keep other flood protection products e.g. emergency grab bags, emergency meals etc.

Dehydro 2 kit contains 1x LSC1.4, 230 volt submersible pump. This has a 480watt motor, weighs 12kgs (dry) and is supplied with a quick release hose connector, 10 metres of power cable and a plug for immediate use.

It will pump approximately 70 litres per minute across 30 metres of level ground, when using 25mm (1") hose. Initial priming of the pump with water is required before starting, it will pump water down to 1mm and can run dry for long periods (e.g. overnight) without damage.

Ideal for use with a generator or mains power (when connected and safe to use).
