

PORTABLE ELECTRIC PUDDLE SUCKER PUMP ALSO KNOWN AS PORTABLE DEWATERING PUMP

Designed for emergency situations to drain small flooded areas to 2mm from the floor.

Flow rate up to 220 L/min (13.2 m³/hr)

Dynamic head up to 9 m

Operating limits:

Maximum operating depth 3m below water level

Fluid maximum temperature + 40 °C

Maximum passage for suspended solids Ø 5mm

Maximum emptying level 2mm from the bottom

Design, technology and innovative materials are the main features behind the new TOP FLOOR pumps, designed to be easy to use and extremely reliable.

Pump installation and applications:

Top Floor pumps are suitable for lifting clear or slightly dirty water not containing abrasive substances. These pumps have been designed for easy use and are extremely reliable even when subjected to continuous use, since the motor is fully cooled and has an ample reserve of power plus a double seal system. The motor is easily removed making maintenance and repair simple.

Thanks to their capacity to drain water down to 2mm these pumps are suitable for domestic emergency use for small flooded areas and for all those applications where maximum drainage potential is required.
